

PCK

PBL GRADE 5

FOOD PRESERVATION

- 1) What is not true about procedural writing?
 - a. It contains instructions.
 - b. It dictates a way of organizing components.
 - c. It is a form of expository writing.
 - d. It cannot have a distinct vocabulary.
- 2) While giving home tasks to the children related to having conversations with family members about the theme/ activity, you notice that parents of a particular child in your class never take up the home task, hence limiting the student of rich experience sharing. What would you do in such a situation?
 - a. Repeatedly remind the child of doing his home tasks related to family members or else withdraw him from his favourite co-curricular periods.
 - b. Have a one on one conversation with the child's parents regarding the issue sensitizing them to how it is important to bridge the home school gap.
 - c. Inform concerned authorities about the child's non-conforming attitude and let them take appropriate action.
 - d. Have a conversation with the child to establish importance of sharing from his own family members towards his own learning.
- 3) When one of my students fails, I
 - a. Check his attendance to know how many classes he has missed
 - b. Tell him to work hard in order to get better results
 - c. Sit with him to explain how his learning is his responsibility
 - d. Sit with him to rework on the concepts that he has not understood
- 4) When one of my students points out that I have given incorrect information/ misspelt a word, I say:
 - a. Very good, this is your favourite job, to point out the teacher's mistakes
 - b. Explain to me how this information is incorrect
 - c. I'm sorry, next time I will check the information before giving it to you
 - d. Thank you and move to the next unit of study
- 5) There are two project teachers in the class because:
 - a. PBL is very demanding and one teacher cannot handle it
 - b. It is a double period and it is tough for a single teacher to lecture for so long
 - c. Teachers are supposed to correct the notebooks regularly so one teacher takes the class and the other corrects notebooks
 - d. Teachers need to be recording observations regularly so when one teacher leads the class, the other makes notes/ collects evidences of student's learning.
- 6) On a hot summer day, Montu bought dosa batter from the market. He poured it out into a container at night and out of his forgetfulness did not put it in the fridge. When he came to his kitchen in the morning he saw the batter had spilt on the kitchen slab. What do you think happened?

- a. Bacteria in the batter multiplied due to warm temperature outside the fridge and therefore the batter spilt out of the container
 - b. The heat of the day, made it boil and spill out of the container
 - c. The batter produced water and since the container was small, the water spilt out of it
 - d. Bacteria from the surroundings got added to the batter and hence the batter increased in quantity, therefore spilling out of the container.
- 7) Jyotsna was creating an interview schedule to find out about skills that people learn from their family members and convert into occupations. One of the questions she wrote was 'What do you do in your leisure time?' What do you think about this question?
- a. It is relevant as she is trying to establish rapport.
 - b. It is relevant as it might help her ascertain whether that person is practising his/ her learnt skill in the leisure time or not.
 - c. It is irrelevant because it does not support in reaching the purpose of the interview.
 - d. It is irrelevant because his/ her leisure time should not bother Jyotsna.
- 8) I am helping the child learn when...
- a. I explain the concept lucidly to the child
 - b. I give the child activities related to the concept and let him figure it out on his own
 - c. I give the child activities and then process his response to the activities to lead to the concept, then look for examples to further clarify the process.
 - d. I tell him that he has to pay more attention in the class.
- 9) Akanksha left garlic cloves in a well-lit place, tightly packed in a plastic bag. When she opened the bag after 3 days, she found fungus growing on the garlic. What caused the growth of fungus?
- a. Presence of enough moisture and warmth
 - b. Presence of air inside the plastic bag
 - c. Presence of light outside the plastic bag
 - d. Presence of warmth outside the plastic bag
- 10) Imagine you are attending someone's wedding. You observe a lot of leftovers being dumped in the dustbin. What would you do?
- a. Instruct people to finish whatever they have in their plate.
 - b. Ask caterers to serve very small portions in the first serving.
 - c. Don't suggest anything to anybody because it is rude to say something to others about food.
 - d. Put up posters: 'Take as much as you can eat, and be healthy' near the caterers; and 'Hope you are not leaving any food behind' near the dustbins.
